Prof. Dr. Joerg Koenigstorfer  
Chair of Sport and Health Management  
Technical University of Munich  
Germany  
September 8, 2022

**Not-for-profit sport clubs** are organizations that do not earn profit for their owners; all the profit goes back into running the organization (Heaslip 2021).

## Performance of not-for-profit sport clubs is multidimensional

(Nowy, Wicker, Feiler, & Breuer, 2015; Winand, Vos, Claessens, Thibaut, & Scheerder, 2014).

Member Relationship

Service Quality

Financial Stability

Sporting Success

## Factors associated with performance of not-for-profit sport clubs

Previous literature identifies multiple sets of factors, but often assumes linearity and monotony between variables (e.g., Nowy, Wicker, Feiler, & Breuer, 2015; Ivašković, 2021; Delshab et al., 2022).

- Strategic focus set
- Environmental set
- HR management practices and HR capital set
- Feelings and behavioral patterns set (e.g., trust)

Koenigstorfer and Wemmer (2019):

- Utilized nonlinear assumptions with random-forest analyses
- Focused on the performance of member relationship management
- Revealed non-linear relationships: 7 out of 10 most important predictors
- Considered 284 sport clubs from the Southwest of Germany

## Research Gap

What is the best-performing model related to performance?

## Research Aims

To assess how well different machine learning-based approaches perform in explaining the four key areas of performance of not-for-profit sport clubs

## Procedure

- **Design:** Cross-sectional survey
- **Sample:** Not-for-profit sport clubs in Canada

## Representative characteristics

- **N:** 126 representatives
- **Age:** 46 (*SD* 10) years old
- **Gender:** 40% female
- **Tenure:** 10 (*SD* 9) years
- **Role:** 47% in the leading roles

## Club characteristics

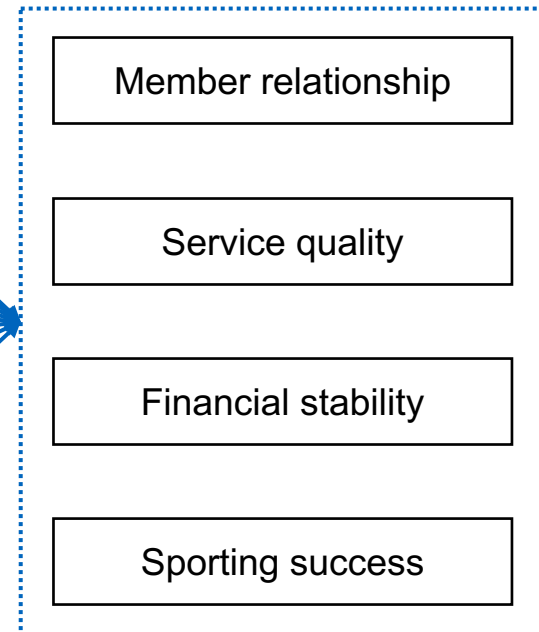

- **Members:** 1206 (*SD* 3581)
- **Volunteers:** 169 (*SD* 507)
- **Types:** 82.5% uni-sport

## Predictors

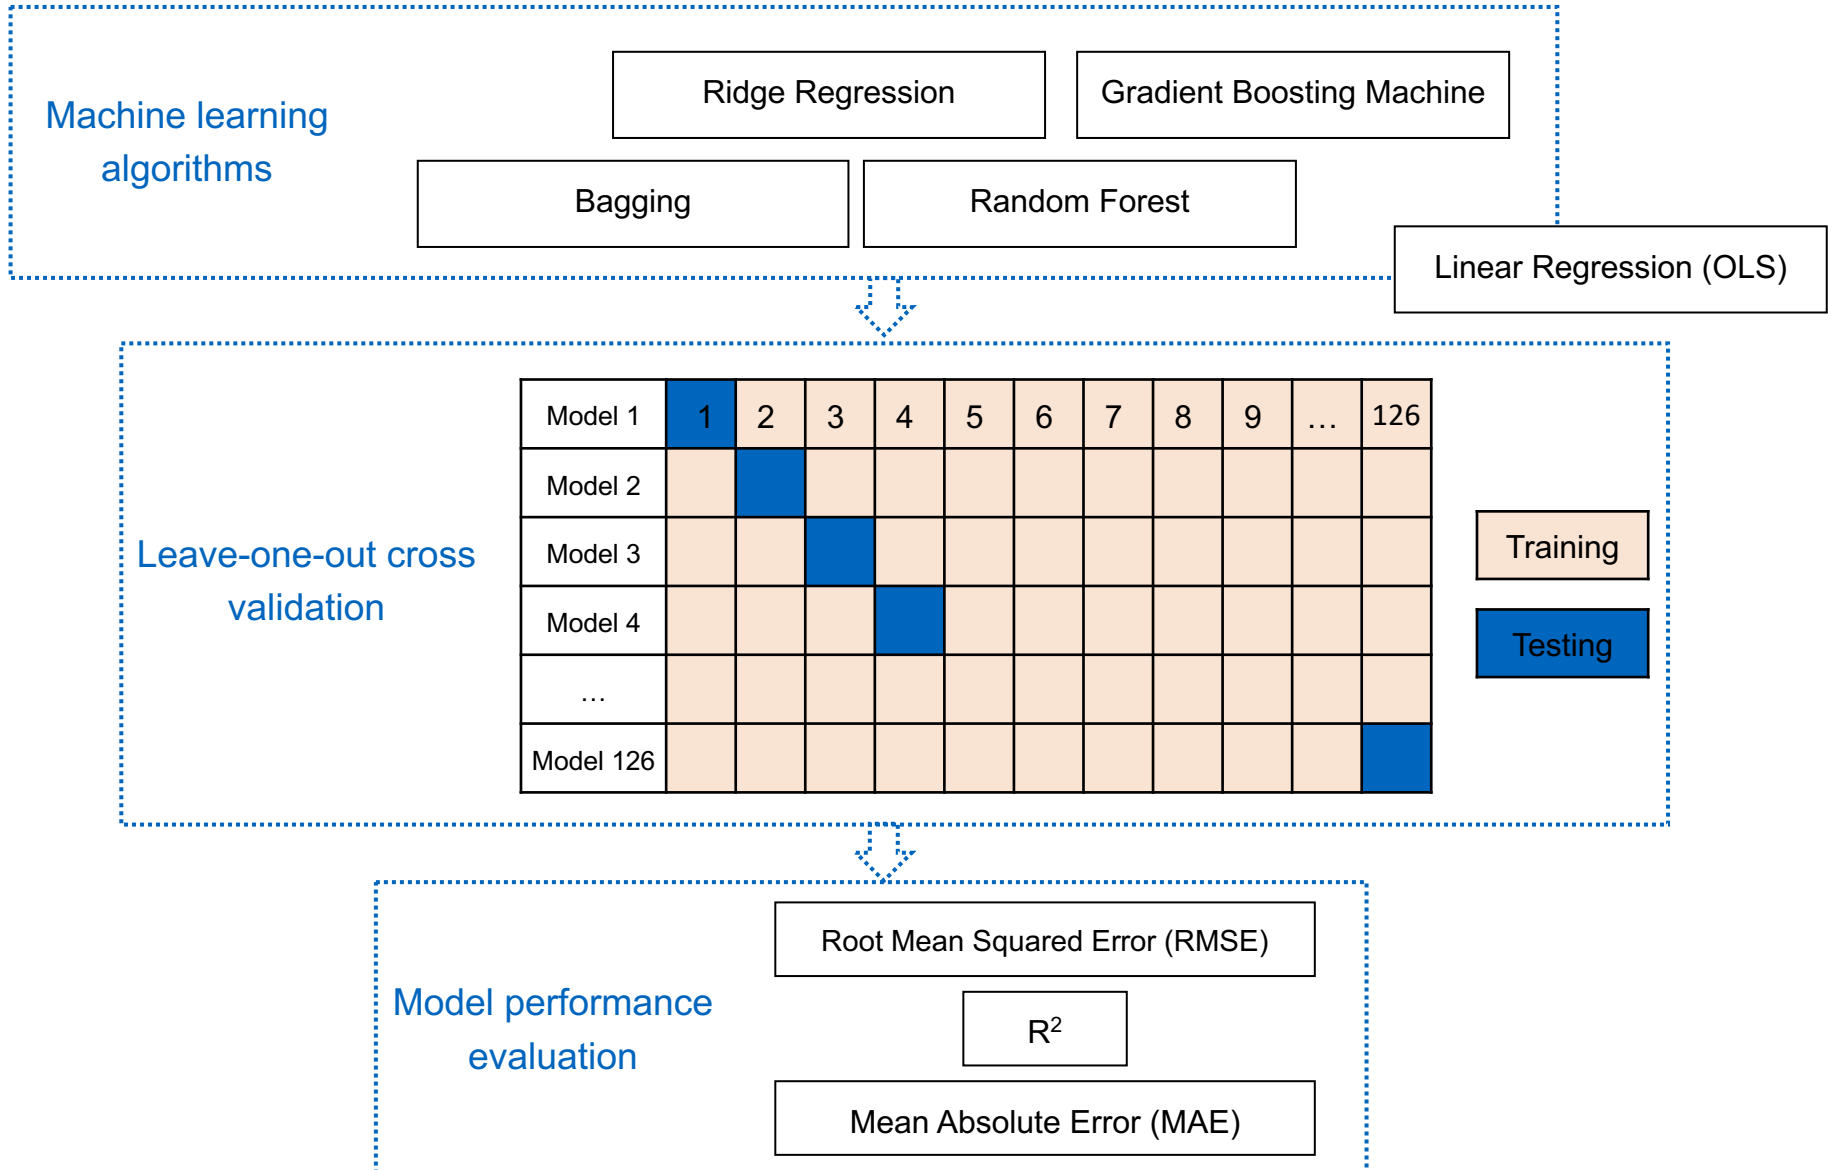

## Response variables

*Measures:* adapted from Homburg & Pflesser, 2000; Sashkin & Sashkin, 2003; Wemmer, Emrich, & Koenigstorfer, 2016.

*Reliability and validity:* All scales fulfilled the common requirements.

	Member Relationship			Service Quality			Financial Stability			Sporting Success		
	RMSE	R <sup>2</sup>	MAE	RMSE	R <sup>2</sup>	MAE	RMSE	R <sup>2</sup>	MAE	RMSE	R <sup>2</sup>	MAE
OLS	1.10	0.13	0.84	0.94	0.22	0.74	1.30	0.03	0.99	1.05	0.03	0.84
Ridge	1.06	<b>0.18</b>	0.91	0.91	0.24	0.71	1.22	0.04	<b>0.93</b>	0.99	0.04	0.80
Bagging	1.07	0.14	0.83	0.90	0.25	0.69	1.20	<b>0.08</b>	0.94	0.97	0.07	0.79
<b>RF</b>	<b>1.05</b>	0.17	0.82	<b>0.88</b>	<b>0.29</b>	<b>0.67</b>	<b>1.19</b>	0.07	0.95	<b>0.94</b>	<b>0.11</b>	<b>0.77</b>
GBM	1.08	0.14	<b>0.81</b>	0.91	0.24	0.69	1.20	0.07	0.94	0.97	0.08	0.78

**Note.** GBM: gradient boosting machine; OLS: Ordinary Least Squares; RF: Random Forest  
MAE: Mean Absolute Error; RMSE: Root Mean Squared Error

Random forest mostly outperforms the other models

# Member Relationship

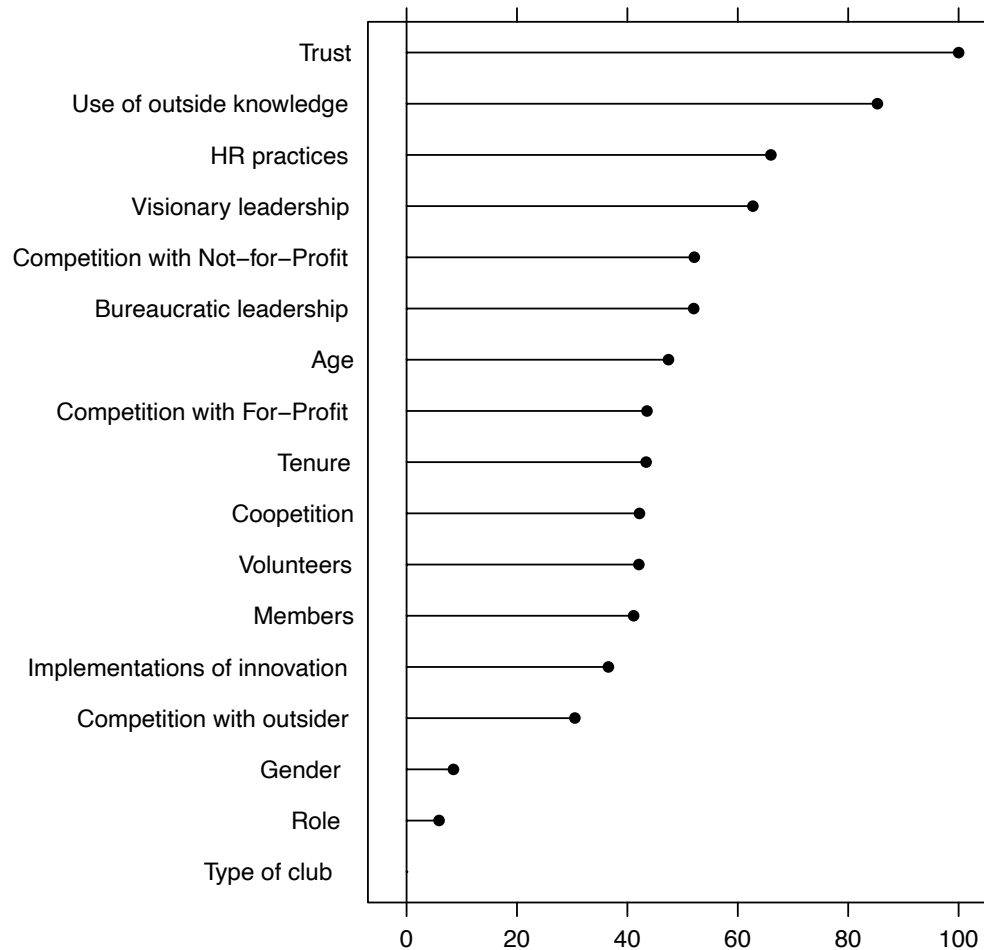

Partial Dependence

**Variable importance:** The percentage increase in mean squared error, scaled to be between 0 and 100.

**Partial dependence:** X-axis: the original unit of the predictor variable. Y-axis: marginal effect of the predictor variable on the response variable.

# Service Quality

Variable Importance

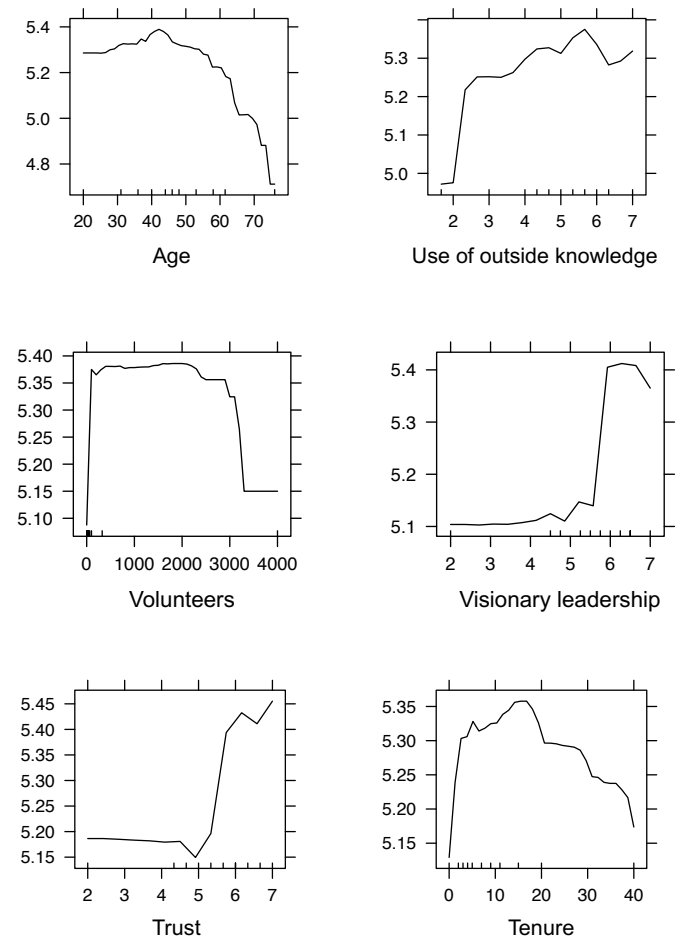

Partial Dependence

**Variable importance:** The percentage increase in mean squared error, scaled to be between 0 and 100.

**Partial dependence:** X-axis: the original unit of the predictor variable. Y-axis: marginal effect of the predictor variable on the response variable.

Variable Importance

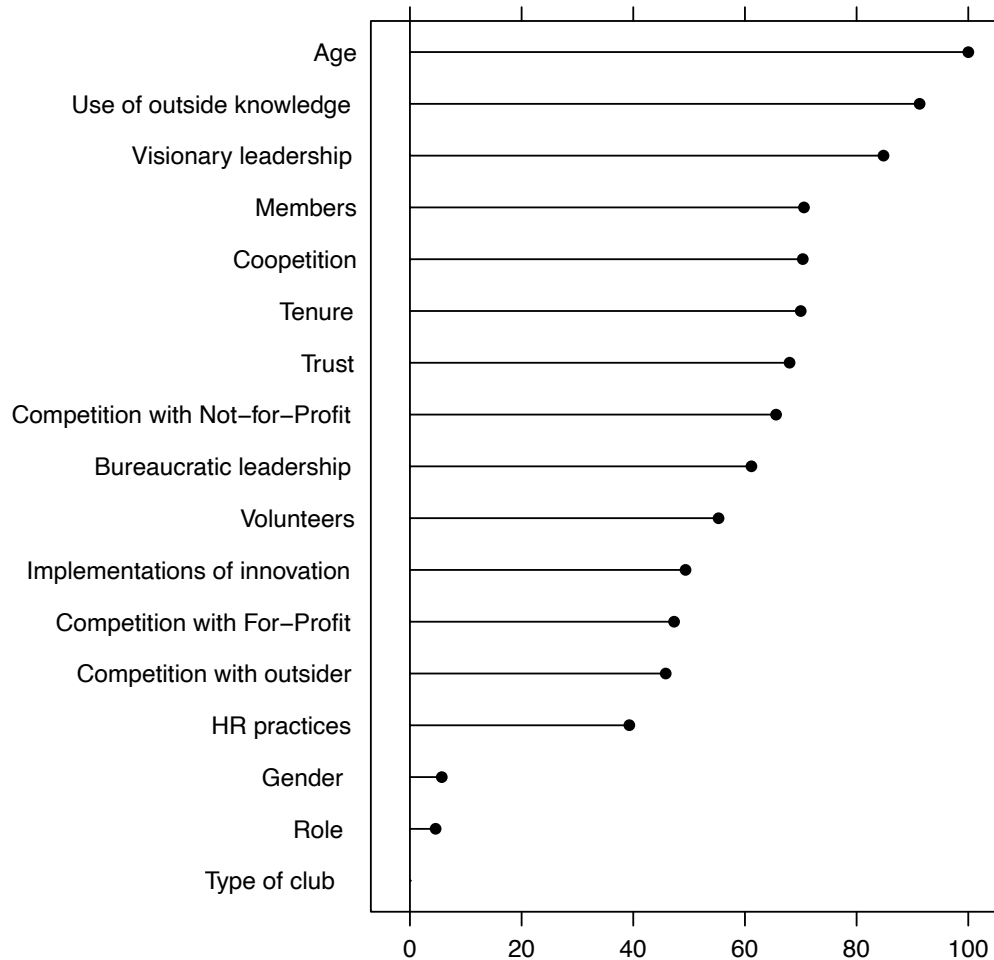

Partial Dependence

**Variable importance:** The percentage increase in mean squared error, scaled to be between 0 and 100.

**Partial dependence:** X-axis: the original unit of the predictor variable. Y-axis: marginal effect of the predictor variable on the response variable.

# Sporting Success

Variable Importance

Partial Dependence

**Variable importance:** The percentage increase in mean squared error, scaled to be between 0 and 100.

**Partial dependence:** X-axis: the original unit of the predictor variable. Y-axis: marginal effect of the predictor variable on the response variable.

## Contributions

- **Theoretical:** Insights into the most important factors that are associated with the four key areas of performance of not-for-profit sport clubs
- **Methodological:** Using advanced machine learning approaches helps improve the explanatory power compared to linear models, and identifies non-monotonous relationships
- **Practical:** Implications for sport club managers on how to increase performance in different domains

## Limitations

- Sample
- Subjective measure of performance

Thank you very much for  
your feedback!
